ANTIBODIES AGAINST SLC15A2 AND USES THEREOF

ABSTRACT

The invention relates to the identification and generation of antibodies that specifically bind to SLC15A2 protein. The disclosed anti-SLC15A2 antibodies and compositions comprising them may be used for diagnosis, prognosis and therapy of cancer (including metastatic cancer) or fibrotic conditions, *e.g.*, ovarian cancer, cervical cancer, prostate cancer, uterine cancer, lung cancer, lung fibrosis, and glioblastoma. The disclosed antibodies include conjugates with cytotoxic effector components that are useful for cancer therapy.
